## (54) LIGHT MEASURING APPARATUS

### (57) Abstract:

**PURPOSE:** To easily obtain an accurate photometric result by simple calculating method without applying a load to a microcomputer, a memory, etc., for forming a correcting unit and a controller.

**CONSTITUTION:** The light measuring apparatus comprises a photo-electric converter 12 for photoelectrically converting a light from an object, output circuits 13, 14 for outputting the information of the converter 12, a logarithmic converter 15 for logarithmically compressing the outputs of the circuits 13, 14, and a corrector 16 for correcting the outputs of the circuits 13, 14, wherein the corrector 16 corrects the outputs of

the circuits 13, 14 after logarithmic compressing it by the converter 15.
